

Drone ETA Prediction — Project Report

This project focuses on predicting the Estimated Time of Arrival (ETA) for drone deliveries using machine learning. The Random Forest model was trained on cleaned drone delivery data.

Steps Completed:

1. Data Cleaning and Preprocessing
2. Handling Missing Values
3. Label Encoding for Categorical Features
4. Train-Test Split
5. Model Training using RandomForestRegressor
6. Model Evaluation using MAE & RMSE
7. Streamlit UI for Real-Time ETA Prediction

This report is auto-generated.
